(54) DEHYDRATING DEVICE FOR UMBRELLA

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a device to sufficiently remove a moisture content from covering cloth for the tip part of a wet umbrella to dissolve a problem since the problem to wet a building floor and other part because of rain water in the covering cloth for the tip part of the umbrella being not removed by a conventional dehydrating apparatus for an umbrella is not dissolved.

SOLUTION: A dehydrating device for an umbrella comprises a casing the upper part of which is opened so as to allow insertion of a folded umbrella; and a pair of press pads, formed of a material having water absorption properties, to receive the umbrella inserted in the casing and be situated in the vicinity of the lower part of the casing in a manner to allow nipping of the tip part of the umbrella from both sides through operation from an external part.
